

Project Profile

New Production Facility, Sun Chemicals Ltd, Yate

Client : Sun Chemicals Ltd
Value : £3 million
Our Role: Principal Contractor - Negotiated Contract

Demolition of existing buildings and construction of a new Production Facility and Offices.

After demolishing asbestos riddled huts our Contract Team undertook the construction of a large Production Facility with integral 2-storey office and mezzanine plant room.

These works, including the careful removal and disposal of the asbestos, could not and did not cause disruption to this working chemical factory. Due to the nature of this environment the Contract Team successfully implemented a high degree of safety control.

This negotiated contract had high architectural content extending into the structural and services elements. Large trussed beams give a clear span over the complete 800m² working environment and roof sheets were designed in a single length to minimise any lap details. The feature curved roof and continual louver walls form an envelope to the high level plant room.

The whole factory is designed to Zone 1 live risk and is fully sprinklered.

During construction, we also negotiated a new on-site car park for employees. Following this, 8 months after completion, we negotiated and carried out a further contract for the construction of a new **Research Laboratory (£1.0m)** for the development of new products, *as shown right.*
