

SMART Technology Solutions

Automatic Number Plate Recognition (ANPR)

At ERH, we pride ourselves on our commitment to successfully delivering for all of our clients. We work collaboratively with designers, suppliers and contractors to improve connectivity; ensuring safety and value whilst minimising potential disruption to the public.

Our qualified and experienced teams have been installing, commissioning and maintaining technology assets across the strategic road networks for over 25 years. We work with local and central government, technology providers and law enforcement to provide a specialised service that encompasses survey, supply, installation, testing, commissioning and maintenance activities and also undertakes associated civil engineering works where practicable.

Technology assets include, but are not limited to, temporary and fixed ANPR, CCTV and radar.

We recognise that the demand for ANPR technology across our networks, both urban and high speed roads, is growing; the need for technology to help detect, deter and disrupt criminality at a local, regional and national level is critical to the safety of our communities. We provide a professional service, serving clients across the UK and working with technology providers to ensure 'trouble free' installations.

Other services include the following:

- Non-intrusive detection supply, installation and commissioning
- CCTV installation
- Electrical systems
- Lighting installation including street lighting
- Traffic signals
- Communications and Electrical Cable installation, testing and commissioning
- Radar
- Smart portable CCTV solutions for roadwork schemes (not requiring constant monitoring)
- High profile security monitoring systems
- Safety Detection Systems

"In 2013 CA Traffic provided large volumes of our latest traffic monitoring product the Black CAT, along with our Evo8/EvoX Intelligent ANPR camera system to the Welsh Government through ERH's All Wales Framework, ERH providing installation, commissioning and subsequent maintenance services.

During these contracts we have worked very closely with ERH and found them to be not only exceedingly diligent and professional but on a personal level extremely helpful and pleasant to work with. As is often the case with field works, sites are not always in the condition expected upon arrival, and it has been our experience that ERH will always go the extra mile to provide a solution "on the day" to ensure the end user is satisfied."

Andrew Frechter
